

Fun Facts About Orion

Orion is a group of stars that live with billions of other far away stars in the Milky Way.

The outline of Orion's stars look like the shape of a big hunter way up in the sky.

The shape of Orion is easy to pick out because of the three stars that are close together in a straight line, making up Orion's belt.

The stars that make up Orion can be seen in the night sky from anywhere in the world.

You can see Orion from the north in the winter sky and from the south in the summer sky.

Check out below to get an idea of how Orion looks in the night sky. Take a look into a clear night sky at your home and see if you can spot Orion's belt!
